

PayDTX API Documentation

Overview

PayDTX provides a RESTful API for cryptocurrency deposit and withdrawal management. This document outlines the available endpoints, request parameters, and response formats.

Base URL

<https://app.paydtx.com/api>

Authentication

All API requests require authentication using one of the following methods:

- 1. API Key:** Include your API key in the request headers as `x-api-key`
- 2. API Key + Secret:** For sensitive operations, include both `x-api-key` and `x-api-secret` in the request headers

API keys can be generated and managed from your PayDTX dashboard.

Supported Networks

PayDTX supports the following blockchain networks:

Network Code	Network Name	Description
BSC	Binance Smart Chain	BEP-20 tokens on Binance Smart Chain
TRC	TRON	TRC-20 tokens on TRON blockchain
ETH	Ethereum	ERC-20 tokens on Ethereum blockchain

API Endpoints

Deposits

Create Deposit

Record a new cryptocurrency deposit.

- **URL:** /create-deposit
- **Method:** POST
- **Authentication:** Required (API Key)
- **Headers:**

x-api-key: YOUR_API_KEY
Content-Type: application/json

- **Request Body:**

```
{  
    "amount": 100.5,  
    "network": "BSC",  
    "contractAddress": "0xabcdef1234567890abcdef1234567890abcdef12",  
    "coinName": "USDT",  
    "ipnUrl": "https://example.com/ipn",  
    "udf1": "user1"  
}
```

- **Response:**

```
{  
    "txnid": "123..",  
    "address": "0x1234567890abcdef1234567890abcdef12345678",  
    "network": "BSC",  
    "contractAddress": "0xabcdef1234567890abcdef1234567890abcdef12",  
    "amount": 100.5,  
    "expiresAt": "date & time"  
    "qr_url": "https://api.qrserver.com/v1/create-qr-code/?size=450x450  
}
```

Withdrawals

Create Withdrawal

Request a new cryptocurrency withdrawal.

- **URL:** /create-withdrawal
- **Method:** POST
- **Authentication:** Required (API Key + Secret)

- **Headers:**

```
x-api-key: YOUR_API_KEY  
x-api-secret: YOUR_API_SECRET  
Content-Type: application/json
```

- **Request Body:**

```
{  
  "txnid": "123..",  
  "amount": 50.25,  
  "address": "0x1234567890abcdef1234567890abcdef12345678",  
  "network": "BSC",  
  "contractAddress": "0xabcdef1234567890abcdef1234567890abcdef12",  
  "coinName": "USDT",  
  "ipnUrl": "https://example.com/ipn",  
  "udf1": "user1"  
}
```

- **Response:**

```
{  
  "status": true,  
  "message": "success"  
}
```

Transaction Tracking

Track Transaction

Retrieve transaction details for a deposit or withdrawal using the address.

- **URL:** /track-txn
- **Method:** POST
- **Authentication:** Required (API Key)
- **Headers:**

```
x-api-key: YOUR_API_KEY  
Content-Type: application/json
```

- **Request Body:**

```
{  
  "address": "0xabcdef1234567890abcdef1234567890abcdef",  
  "type": "deposit" // optional
```

```
"type": "deposit", // OR "withdrawal"  
"txnid": "123"  
}
```

- **Response:**

```
{  
  "type": "deposit",  
  "amount": 100.5,  
  "address": "0xabcdef1234567890abcdef1234567890abcdef",  
  "txHash": "0xabcdef1234567890abcdef1234567890abcdef12345678901234567890a:",  
  "status": "PENDING",  
  "network": "BSC",  
  "createdAt": "2025-03-07T13:02:08.000Z"  
}
```

- **Error Responses:**

- 400 Bad Request : Missing parameters or invalid type
- 401 Unauthorized : Invalid API key
- 404 Not Found : Transaction not found for the given address
- 500 Internal Server Error : Server error

- **Notes:**

- The `type` parameter must be either "deposit" or "withdrawal"
- txnid is sent when we make deposit or withdrawal api call.
- Users can only access their own transactions unless they have admin privileges
- The API returns transaction details directly from the deposit or withdrawal table

Check Balance

Check Balance of given wallet

Balance of mainnet or token.

- **URL:** /get-wallet-balance
- **Method:** POST
- **Authentication:** Required (API Key + Secret)
- **Headers:**

```
x-api-key: YOUR_API_KEY  
x-api-secret: YOUR_API_SECRET
```

Content-Type: application/json

- **Request Body:**

```
{  
  "network": "BSC",  
  "contractAddress": "0xabcdef1234567890abcdef1234567890abcdef12", |||  
  
}
```

- **Response:**

```
{  
  "status": true,  
  "address": "wallet address",  
  "network": "BNB",  
  "contractAddress": "0x...",  
  "coinName": "USDT",  
  "balance": 100.00,  
}
```

Blockchain Explorer URLs

Transactions can be viewed on the respective blockchain explorers:

Network	Explorer URL	Example
BSC	https://bscscan.com/tx/{txHash}	https://bscscan.com/tx/0x1234...
TRC	https://tronscan.org/#/transaction/{txHash}	https://tronscan.org/#/transaction/0x1234...
ETH	https://etherscan.io/tx/{txHash}	https://etherscan.io/tx/0x1234...

Webhook Notifications

PayDTX can send webhook notifications for important events such as deposits, withdrawals, and status changes. The notification will be sent as a POST request to the `ipnUrl` you provide in your API calls.

IPN Payload Example

```
{  
  "event": "deposit_confirmed",
```

```
"txnid": "123",
"txHash": "0xabcdef1234567890abcdef1234567890abcdef12345678901234567890
"status": "COMPLETED",
"amount": 100.5,
"network": "BSC",
"timestamp": "2025-03-07T14:05:20.000Z",
"udf1": "user1"
}
```

Support

If you have any questions or need assistance, please contact our support team at support@paydtx.com.
